

FEATURES

- | Tracks aircraft for company and customer fleets.
- | Tracks total time, cycles & landings, make, model, and serial number

INTEGRATION

OVERVIEW

The Aircraft Module is integrated throughout CORRIDOR® to provide and maintain all information relating to each aircraft. As maintenance is performed on an aircraft and work orders are processed, the Aircraft Module maintains a history for that aircraft. Historical data is vital to efficiency in the service process. The Aircraft Module works closely with the Regulatory Compliance Module to keep track of scheduled maintenance and inspections.
