

## FEATURES

- | Keeps track of information about individuals that work for customers or vendors.
- | Integrated with Company Database module.
- | Links individual contacts with the companies for which they work.
- | Special section for comments to be added.
- | If a contact should change companies, information can be reflected and updated in the Company Database.

## INTEGRATION

## OVERVIEW

The Contact Management Module works directly with the Company Database Module. This module keeps track of these employees by name. Each name can then have the company they work for attached. Other information specific to the contact can be added at anytime.

Once a contact has been created it can be referenced throughout CORRIDOR. Each time a Purchase Order, Customer Request, Sales Order, or Work Order is created the user can identify the company and then see a list of contacts for that company and specify which contact is responsible for the transaction being processed.

With the added ability to list personal information about your contacts (addresses, birthdays, spouse's and kids names) reports can be generated to greatly enhance the relationship between a facility and its clients.
